Research Questions

My Research questions I aim to answer

- ▶ Can visualizing the actions an agent may take in the competition lead to insights about the strengths and weakness of each tree search algorithm

Research Questions

My Research questions I aim to answer

- ▶ Can visualizing the actions an agent may take in the competition lead to insights about the strengths and weakness of each tree search algorithm
- ▶ How can the scaling of different metrics within the competition affect the performance of different tree search algorithms

My Research questions I aim to answer

- ▶ Can visualizing the actions an agent may take in the competition lead to insights about the strengths and weakness of each tree search algorithm
- ▶ How can the scaling of different metrics within the competition affect the performance of different tree search algorithms
- ▶ Could a hyper-heuristic be created from the strengths of multiple tree search algorithms

The Goal of this Research Artifact

The Goal

The Goal of this Research Artifact

The Goal

- ▶ To create a hyper heuristic agent that has been modified from the strengths and weaknesses found in different tree search techniques.

The Goal of this Research Artifact

The Goal

- ▶ To create a hyper heuristic agent that has been modified from the strengths and weaknesses found in different tree search techniques.
- ▶ The strengths and weaknesses will be found by visualizing and analyzing the search space of a tree search algorithm.

The Goal of this Research Artifact

The Goal

- ▶ To create a hyper heuristic agent that has been modified from the strengths and weaknesses found in different tree search techniques.
- ▶ The strengths and weaknesses will be found by visualizing and analyzing the search space of a tree search algorithm.
- ▶ Also by looking at how the scaling of different metrics within the competition frame work and seeing how they affect the performance of different agents.

Preliminary results

Visualizations for the GVG-AI Competition

- ▶ One of my main focuses this far is to get visualizations rendering over the competition.

Preliminary results

Visualizations for the GVG-AI Competition

- ▶ One of my main focuses this far is to get visualizations rendering over the competition.
- ▶ This will help facilitate the data collection about the strengths and weaknesses of different search algorithms.

Preliminary results

Visualizations for the GVG-AI Competition

- ▶ One of my main focuses this far is to get visualizations rendering over the competition.
- ▶ This will help facilitate the data collection about the strengths and weaknesses of different search algorithms.
- ▶ Being able to visualize where the agent is planning to go and finds most interesting/valuable to explore can help to creating an hyper heuristic

- ▶ Being able to visualize where the agent is planning to go and finds most interesting/valuable to explore can help to creating an hyper heuristic
- ▶ An example of the different metrics that can be tweaked to see how they affect the agents success rate are:
 - ▶ Competition time
 - ▶ MCTS iterations & Exploration vs Exploitation ratio, and other tree search equivalents

The Next Step

The Next Step

- ▶ Finish the visualizations of the different tree search algorithms

The Next Step

The Next Step

- ▶ Finish the visualizations of the different tree search algorithms
- ▶ Gather the data about where different tree search techniques succeed and what are their limitations

The Next Step

The Next Step

- ▶ Finish the visualizations of the different tree search algorithms
- ▶ Gather the data about where different tree search techniques succeed and what are their limitations
- ▶ Use that data to start creating a hyper-heuristic agent that can take advantage of different tree search strengths

The Next Step

The Next Step

- ▶ Finish the visualizations of the different tree search algorithms
- ▶ Gather the data about where different tree search techniques succeed and what are their limitations
- ▶ Use that data to start creating a hyper-heuristic agent that can take advantage of different tree search strengths
- ▶ Submit that agent to the GVG-AI competition

Demo of the GVG-AI competition

Example Games

Angles, BoulderDash, Pac-man, Zelda, Frogger.

Demo of the GVG-AI visualizations

Example of MCTS visualisations

Demo of the GVG-AI competition and visualizations

Live Demo!
